Request for Continued Examination

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on July 13, 2009 has been entered.

Drawing Objections

2. Figures 7 and 8 should be designated by a legend such as -- Prior Art-- according to the specification, sections 0018 and 0019.

3. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, in Claim 1, the amended feature "an amplitude of a polarized light component that is polarized perpendicular to the track direction is greater than that of other polarized light components," must be shown or the feature canceled from the claim. No new matter should be entered.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 1-3 and 10-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding Claim 1, line 4, the phrase "reproducing information" is vague because it is a functional operation under the claimed "recording medium" which cannot reproduce information.

Regarding Claim 1, lines 22-24, the phrase "focusedthrough the other recording layer" is vague because the recording layer 1d (Fig. 1) which is the first layer to received the reproduction light does not require the light focused through the other recording layer 1a-1c.

The claims not specifically mentioned above are rejected because these claims are dependent on the rejected base claim.

Art Unit: 2627

Allowable Subject Matter

6. Claims 1-3 and 10-21 would be allowable if rewritten or amended to overcome the rejection under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

7. The following is an Examiner's statement of reasons for the indication of allowable subject matter:

As in claim 1, the prior art of record fails to teach or fairly suggest an optical information reproduction device having following features: the information recording medium has a track pitch of no more than 1.3 times the wavelength of the reproduction light, the first semiconductor laser light source has a characteristic such that it emits the reproduction light in which an amplitude of a polarized light component that is polarized perpendicular to the track direction is greater than that of other polarized light components, or an optical component is provided along the optical path between the first semiconductor laser light source and the objective lens so as to switch the state of polarization of the reproduction light emitted from the first semiconductor laser light source, whereby the amplitude of a polarized light component of the reproduction light that is polarized perpendicular to the track direction is

caused to be greater than that of other polarized light components.

The features indicated above, in combination with the other elements of the claims, are not anticipated by, nor made obvious over, the prior art of record.
